

start menu/run/ type "regedit" and press enter,

this will take you to the registry editor

now follow this directory:

HKEY_LOCAL_MACHINE/Software/Microsoft/WindowsNT/CurrentVersion/WPAEvents

when you get to WPAEvents in the righthand collum there should be "OOBETimer"

right click it and go to "modify"

Change the numbers in there to :

FF D5 71 D6 8B 6A 8D 6F d5 33 93 FD (this works with windows xp home and pro, both 32 and 64bit versions)

when you've entered them right click on the file "WPAEvents" and go into "permissions"

in there highlight "SYSTEM" and underneith it check the two boxes under "deny"

and click "OK"

now windows is Activated ENJOYYYYYYYYYYYYYYY!!!!!!!!!!
